PROFILE.

Senior full stack engineer since 2018 on **business-critical systems**: media logistics (Canal+), energy (GRDF), banking (Société Générale), port logistics (Tanger Med). Specialized in **Java / Spring Boot backend** and **event-driven microservices architectures** (Apache Kafka, Avro, Schema Registry), with solid **React / Next.js** experience. Advanced **AI-assisted development** practice: Claude Code daily, context engineering, MCP.

EXPERIENCE.

Full Stack Engineer - Java / React

Sep 2026 → present

Canal+ · via Néosoft, Logistics team, Paris

Construction of an international logistics platform for Canal+ equipment (set-top boxes, smart cards, accessories), covering the whole chain: warehouse supply, stock management, distribution and delivery, after-sales and inventory, across France, the French overseas territories, Africa and Poland.

- Full stack development of the logistics business applications: features built and maintained end to end, from Spring Boot microservices to React / TypeScript front ends
- Microservices environment with a shared design system and common coding conventions across teams
- Maintenance of legacy Java applications alongside the modern services

Java 21 · Spring Boot · Spring Cloud · React · TypeScript · Maven · pnpm · Docker · Oracle

Software Engineer - Java / Spring Boot

Jan 2025 → Aug 2026

GRDF · via Néosoft, Paris

VEGA program: overhaul of the OMEGA application sphere, the business-critical IS handling the relationship between GRDF and energy suppliers (intervention requests, contracts, customer communications, gas-distribution billing), toward an event-driven microservices architecture (Java 17 / Spring Boot 3 / Apache Kafka). Work on the Request core service and the Contractor & Claims services, with cross-cutting contributions (B2B supplier web services, authorizations, gateway).

- Built and evolved the REST APIs driving the intervention-request lifecycle (creation, update, cancellation, appointment booking and management) and the associated business rules (statuses, allowed actions, history, date ranges)
- Maintained and evolved the Drools business-rules engine: decision tables for business rules (statuses, allowed actions, fees)
- Migration to the new field-intervention platform: built the Kafka consumers for intervention reports, switched intervention-type computation and automatic rescheduling, then fully decommissioned legacy integrations across all environments
- Built Kafka Avro consumers and producers, replay of failed flows, Kafka simulators for testing, Avro schema evolutions with the Schema Registry
- Large-scale Spring Batch jobs: daily publications to energy suppliers (CSV generation, SFTP drop), communication reminders, appointment reminder SMS, bulk file processing with validation, orchestrated with the VTOM scheduler
- Integrations with group information systems: SAP (meter readings, acknowledgments), subscription enrollment, index control (SOAP / REST), S3 document storage; generation and sending of communications (Thymeleaf email templates, PDF attachments)
- Outbound customer communications: mail / email / SMS template repository (creation, variables, GDPR archiving), sending batch jobs, document archiving
- PostgreSQL data-model evolutions through Flyway migrations
- Evolutions of the SOAP B2B web services exposed to energy suppliers' systems
- Feasibility study, POC then rollout of Microcks to share integration mocks across teams (OpenAPI specifications, automated CI/CD import)
- Production and acceptance-testing support: on-call duty and after-hours interventions, bug fixes on release branches, support for business UAT

- AI-assisted development: daily use of Claude Code (implementation, large refactorings, tests, debugging), contribution to team context engineering and the internal plugin marketplace, MCP integrations (GitLab, Jira/Confluence)
 - Agile ceremonies, systematic code reviews through merge requests, technical documentation, knowledge-sharing sessions
- Java 17 · Spring Boot 3 · Kafka/Avro · PostgreSQL · Drools · Flyway · JOOQ · GitLab CI · SonarQube · Testcontainers · Ansible · VTOM · Microcks

Full Stack Engineer - Java / React

Feb 2022 → Sep 2024

Société Générale · via NormaSys, RISQ division, Paris

NOVA: rebuild of the credit-rating application for non-retail counterparties (SMEs, large corporates, institutions), replacing the legacy systems.

- Built performant, scalable REST APIs in Java 11 / Spring Boot; OpenAPI / Swagger documentation for adoption by other teams
- Designed modern, ergonomic React / Redux user interfaces, documented with Storybook
- Spring Batch: migration and synchronization of sensitive data from the legacy system; daily batch jobs
- Java 17 / Spring Boot 3 migration; transition to a microservices architecture on Kubernetes / Docker, automated Jenkins deployments
- Monitoring and logging with the ELK stack and Grafana
- Demanding quality standards: TDD / BDD (JUnit, FitNesse, Cucumber), thorough code reviews, SonarQube
- Onboarded new team members, led agile estimation sessions

Java 11/17 · Spring Boot · React · Redux · PostgreSQL · Kubernetes · Docker · Jenkins · ELK · Grafana · AWS S3 · Liquibase · MyBatis

Full Stack Software Engineer

Jul 2019 → Dec 2021

Tanger Med Port Authority · Tangier, Morocco

Port Community System: business-critical portal connecting the stakeholders of Africa's leading container port (customs, freight forwarders, shipping lines, terminals) for logistics-flow management.

- Designed the architecture of the new platform (Kubernetes, Docker, Java / React) - scalability, robustness, availability
- Built the BerthPlan and Slot Management microservices: real-time scheduling of vessel berthing slots (Passenger Port)
- Migration strategy for the PMIS application and legacy applications to the new portal
- EDI / Web Services integrations with strategic partners (customs, FOODEX, other ports, container terminals)
- Monitored integration and functional testing in production (Import/Export, PMIS, Passenger Port, Container Terminals)
- Functional and technical documentation, end-user training sessions

Java 8/11 · Spring Boot · React · Oracle · SQL Server · MongoDB · Kubernetes · GitLab CI · Grafana · WebMethods

Software Engineer - Electronic Payments

Nov 2018 → May 2019

AXENTIS Group · Casablanca, Morocco

- Full project lifecycle on electronic-payment projects, from design to client delivery
- Built critical features for electronic payment terminals (POS) - card payments, security standards
- Designed and built an invoice financial-reconciliation application

J2EE · Hibernate · JSF · SQL Server · Cordova · UML

SKILLS.

BACKEND

Java 8 → 23, Spring Boot 3 (Web, Data JPA, Batch, Security, Kafka), Spring Cloud, Node.js

FRONTEND

React, Next.js, Redux, TypeScript, Tailwind CSS, shadcn/ui

QUALITY & TESTING

JUnit 5, Mockito, WireMock, Testcontainers, EmbeddedKafka, SonarQube, TDD / BDD

APPLIED AI

Claude Code (skills, MCP), context engineering, Python tooling

EVENT-DRIVEN

Apache Kafka, Avro, Schema Registry, replay patterns

DATA

PostgreSQL, Oracle, MongoDB, Flyway, JOOQ, Hibernate

DEVOPS & CLOUD

Docker, Kubernetes, GitLab CI, Jenkins, Ansible, AWS (S3), Gradle, Maven

METHODS

Agile Scrum, code reviews through merge requests, quarterly releases

EDUCATION & CERTIFICATIONS.

- 2026 **AWS Solutions Architect & Developer Associate training** · Néosoft, 3 days
- 2025 **AI Program - Software Engineering Expertise** · Néosoft training
- 2018 **Engineering degree - Computer Science & e-Logistics** · ENSIAS, Rabat
- 2016 **Machine Learning** · Coursera
- 2015 **M1 Master's in Computer Science** · Faculty of Sciences, Tétouan
- 2014 **Bachelor's in Mathematics and Computer Science** · Faculty of Sciences, Tétouan

PERSONAL PROJECTS.

Certi-DPE.fr - AI-powered SaaS analyzing energy-performance certificates (rental compliance).

Next.js · Supabase · GPT-4o · Stripe

Truqar.ma - car rental marketplace (verified agencies ↔ renters): web platform and mobile app.

Next.js · React Native · Expo · Prisma · Supabase

LANGUAGES.

French bilingual · English fluent
